4. Saddle Clips (Coro Roof)
5. Saddle Clips (Deck Roof)
6. Trimets® (Fastens Mesh to Gutter Edge)
7. Screws

Our range of components vary depending on your kit type!

How it works

The LEAF STOPPER® system is the logical and practical solution to gutter and valley protection. It works by attaching one edge of the mesh to the front lip of the gutter, while the other edge passes over the first row of tiles and is secured under the second row. On metal roofs, purpose engineered saddles secure the mesh on the roof and valley edges.

Leaf Stopper® is designed using a special ski-slope system. Unlike conventional gutter guards that catch and hold leaves, Leaf Stopper® allows a greater chance for leaves to slide off naturally, meaning less maintenance.

Leaf Stopper® has the distinct advantage over conventional gutter guards to fully protect valleys.

Leaf Stopper® has a patented fastening system using Trimets. A pre-punched tongue & slot metal fixture makes it easier to use with a great looking finish.

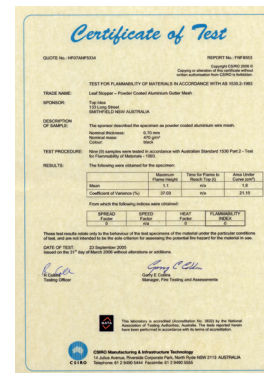

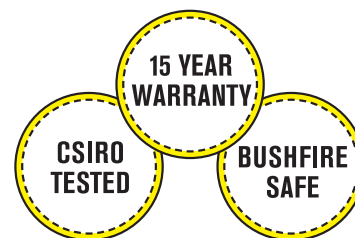

Other important Leaf Stopper® benefits:

- Treated Aluminium mesh to increase strength
- Certified powder coating to increase colour life expectancy
- Australian made accessories
- Strong, patented designed Corro and Deck saddles.

* Suits Trimdek®, Monoclad®, Superdek® and Trimclad® type of metal roofs.

Our 15 yr warranty and top CSIRO rating, makes Leaf Stopper® the outstanding gutter protection system.

- Extends gutter life
- Keeps pests out
- Range of colours
- Minimises gutter cleaning
- Ideal for rainwater tanks
- Maximum CSIRO fire rating
- Colorbond® compatible
- Suits most roof types
- Leaves simply blow away

With 20 colours to choose from, Leaf Stopper® has the widest range on the market and can match any tile or metal roof.

Colours are only a guide and ideally selection should be made with actual colour samples. COLORBOND® colours are a registered trademark of BlueScope Steel Limited.
